2006-2660: A GLOBAL MODEL TO ASSIST HIGHER EDUCATIONAL INSTITUTION TO INCREASE MINORITY ENROLMENT

Fazil Najafi, University of Florida
A Global Model to Assist Higher Educational Institutions to Increase Minority Enrollment

Abstract

A higher educational institution must include in their overall mission to increase the enrollment of minority students within its student population. The population of the United States is very diverse, yet many universities lack diversity within their student population. This paper presents a model that incorporates growth in the number of minority students within the existing student population as part of a university’s overall mission.

The proposed model focuses on university student enrollment and presents a step-by-step procedure of how to increase the number of minority students within the overall student population. To enhance the existing diversity of a university, the model looks at the existing university student population and sets a target number to achieve over a planning horizon. A realistic target number can be established by looking at the existing minority population and the rate of change over the past ten years. A realistic yearly rate can only be established if the university already has an aggressive recruitment and retention program. The success of the model depends on how the university’s overall mission treats diversity in its future growth. In the overall growth picture, a diversity strategy should be included with a strong commitment to increase the number of minorities among the student body, faculty and staff. This model includes programs such as recruitment, retention, orientation, and professional development workshops.

The allocation of resources plays a vital role in the implementation of the diversity model. The model includes two parts, one for each of the undergraduate and graduate populations. The programs need to be actively incorporated and coordinated within each department of the various colleges under the main umbrella of the university’s overall mission. The program coordinators work as a team in competitive cooperation to successfully implement the mission for diversity under the goals of the institution of higher learning. The team members’ aggressiveness, motivation, creativity, interpersonal skills, financial support and recognition of the importance of diversity within the student population play a vital role in the successful implementation of this program. The model includes an assessment feature and provides a mechanism that gives feedback from all colleges within the university for continuous monitoring of program assessment and improvement.

Introduction

An institution of higher education (IHE) must not lack diversity in admitting blacks and other minority students. National Science Foundation data shows that only a fraction of the black students who earn a doctorate degree is hired as a university professor. Blacks make up 3 percent of the legal field, 4 percent of college faculty and 5.2 percent of entertainers, writers, and professional athletes in the U.S. Under the formula for
academic failure, Raspberry stated that one study found that the home of the average white kindergartener had 93 books, the average black less than half as many. Recognizing these facts, it is essential for every IHE to allocate a portion of their resources in the form of scholarships and fellowships in admitting minorities in their institutions. This paper presents a model that may be used by an IHE to enhance its existing graduate and undergraduate minority enrollment. The model is designed for both short-term and long-range practice. To achieve diversity, the IHE strategic plan should have a target year that shows the existing enrollment of minority students as well as the projected future trend. The model suggests that an undergraduate (UG) and graduate (G) minority program must be established first. The IHE organizational flowchart should include the UG & G program. Dedicated and committed efforts are needed throughout the university colleges and departments to actively participate in the implementation of such a model. The success of the model depends on aggressive recruitment, retention, and orientation through planned professional development workshops. A workable model can be achieved by placing the UG & G mission under the university’s overall mission. The university’s mission should have the ability to continuously deliver productive students to the society. To keep up with diversity, offering of fellowships and financial aid is needed to attract qualified under-represented social/ethnic groups. Such a mission will only be accomplished through full dedication of administrators, faculty and staff. Each department within IHE colleges must participate in vigorous recruitment of top quality UG & G minority students, maintaining and hiring diversified top administrators and staff with faculty engaged in state-of-the-art teaching, research and service. This paper presents steps needed to enhance minority enrollment. Finally, there is a mechanism that will provide feedback from all colleges within the institution for the continuous assessment and improvement of overall programs. Student academic advisors play a vital role in supporting and retaining students until they complete their education.

The Model

Figures 1a and 1b together present a proposed IHE diversity model. The model looks at the existing total number of minority students (MS) and projects MS growth over a span of time. The MS growth is achieved through aggressive recruitment and retention.

The model looks at both UG & G programs and incorporates them under the mission of IHE. Both UG & G programs are linked and to succeed they should be enhanced at the same level of effort with proper allocation of resources. The curriculum components are important in supporting student retention. There should be student support services including tutoring, counseling, career advising, and employer encouragement. At the graduate level, there are many minority students of superior ability who demonstrate financial need and plan to pursue a PhD degree in a designated area of national need. The IHE Diversity Model should offer fellowships to such students and increase their numbers by aggressively promoting recruitment, retention and orientation of those talented students from traditionally underrepresented backgrounds.
Figure 1a. First part of a proposed model of the IHE Mission to enhance the overall undergraduate and graduate enrollment of minority students.
Figure 1b. Second part of a proposed model of the IHE Mission to enhance the overall undergraduate and graduate enrollment of minority students.
Steps to Achieve IHE’s Objectives

The first and utmost important step is to develop a strategic plan within the IHE. All colleges and departments within a typical IHE must develop strategic plans that are consistent with the IHE’s overall strategic plan. The IHE strategic plan can be successful only if the strategic plans of the colleges and departments are in full support of the IHE’s strategic plan. Each college and its departments must work closely with the UG admissions office and the dean of the graduate school to identify, recruit and retain qualified underrepresented graduate students in line with the goals and objectives of the IHE program. The IHE must allocate certain numbers of fellowships to each college. From the fellowship pool, each college allocates a certain number of fellowships to each of their departments. This process assists each department in using their own recruitment process in conjunction with their college and university recruitment program to attract graduate minority students. The IHE must develop an aggressive recruitment, retention and orientation program. Figures 1a and 1b present an IHE model strategic plan that provides a basis for each department to develop and enhance their recruitment program under the IHE’s main umbrella. Each department within a college can strengthen its undergraduate recruitment efforts through its association with K-12 and industry involvement, particularly for recruitment and retention efforts. In this process, faculty support and dedication are essential toward accomplishing minority student recruitment and retention.

Evaluation Plan

The goals of the IHE program are to increase the number of qualified graduate and undergraduate minorities from traditionally underrepresented backgrounds. Each department within the college should closely work with the offices of the IHE Graduate and Undergraduate Minority Assistant Dean(s) to aggressively recruit minority students. A typical pattern of recruitment and stages for student selection include:

- Defining the pool of qualified individuals
- Recruiting applicants
- Screening out applicants who do not meet minimum qualifications
- Selecting the most acceptable from among all qualified applicants
- Persuading recruits to accept offers to pursue careers or advanced study in a field
- Training and socializing recruits
- Providing opportunities for successful recruits to make a smooth transition from training into meaningful employment trajectories.

The above process can be used by each department to recruit existing qualified minority students within the department as well as from other universities. Vigorous minority recruitment, backed by financial assistance such as fellowships, can yield improvements in each department’s enrollment, retention, and graduation rates. Figure 1b presents goals for recruitment, retention, orientation and placement. An institution can establish its objective to increase graduate minority students enrollment by a certain number over the next decade. Considering the current minority graduate student enrollment trend, each
department will use their existing allocated number of fellowships and provide support to a certain number of new graduate and undergraduate minority students over the next decade. Increasing the enrollment of talented graduate students from traditionally underrepresented backgrounds would definitely meet the set objective of any IHE diversity program.

**Assess the Effect of Offering IHE’s Fellowships to Minority Students**

The purpose of the IHE diversity program should be to realize and understand barriers to academic mobility and to identify effective strategies to increase the flow of underrepresented racial/ethnic groups. The departments within each college should be able to successfully achieve the IHE goal by recruiting and increasing the number of assistantships to new graduate students of superior ability who demonstrate financial need and plan to pursue PhD degrees in a designated area of national need. The IHE’s fellowship should be offered to those qualified persons of different racial and ethnic backgrounds, genders and ages and persons with disabilities. With the help of the IHE fellowship program, each department’s retention and graduation rates will be significantly improved. Furthermore, it will have a large impact on the expansion of the overall candidate pool.

**Process and Product Evaluation**

This process includes working closely with the Deans of the UG and G minority programs to recruit qualified students. After a successful recruitment process, the evaluation questions become critical to the successful completion of the education of the UG and G students. Once students are enrolled in the IHE’s fellowship program, the designated course advisors in each department are to meet with the candidates on a regular basis to evaluate the student’s educational activities and progress. Each candidate is to have a separate file including the list of courses for the duration and completion of his/her BS, MS, and PhD program. On a regular basis, the designated professor is to meet the IHE’s Fellowship Program Directors for both UG and G students. The professor is then to brief the program director on the status of the student’s progress. Accordingly, the director of the fellowship program is to update his management plan regularly.

**Evaluation Measures**

An advisor, who is also a student mentor, is to be assigned to each student. A mentor-mentee relationship is then established. A mentor shares valued skills to improve the mentee’s marketability. The mentor will work closely with the mentee to broaden the mentee’s educational perspective, support the mentee’s academic and social endeavors, foster activities in academic organizations and other leadership roles and consistently serve as an available resource. Data, such as in Table 1, enable student advisors to assess a student’s progress and provide complete assessment reports to the IHE Fellowship Program Directors.

Data Collection Procedures

The IHE Fellowship Program Directors are to develop a spreadsheet including each candidate’s name, gender and ethnic background, e.g., American Indian or Alaskan, Asian or Pacific Islander, African American, Hispanic American, person with disabilities, and other. Other developed spreadsheets are to include course lists of candidates with possible graduation dates, work schedules, regular meeting schedules, work progress on a daily, weekly, monthly and semester basis. This type of data collection procedure is very effective in retaining and evaluating a student’s overall academic standings. Students and advisors must be responsible for developing assessment data that is updated regularly and kept by all parties involved in the assessment program.

Applicants’ Accessibility to Their Data Record

Each UG and G student has full access to his or her work progress. Students are to maintain their work progress records (e.g., courses, grades, etc., see Table 1). Similar assessment tables are also to be developed to reflect the student’s research work progress. From these tables, applicants are able to analyze their work, adjust and make improvements on a regular basis, and report to their advisors. Reports can regularly be collected.
by a student advisor and submitted to the IHE’s Fellowship Project Directors. The directors evaluate the reports, make necessary comments and return to the student’s advisors.

**Time-line Chart**

A table can be prepared showing student name, admission date, semester attended (e.g., Fall, Spring, Summer). Such a table can be compared with another table (work progress) showing student name, list of activities, person responsible, start date, completion date and status. These types of tables, including Table 1, for each candidate should provide key evaluation processes and benchmarks reflecting each candidate's overall progress.

**Conclusion**

In most IHE’s in the U.S., the enrollment of persons with different racial and ethnic backgrounds has been low for the past ten years. A typical model is presented in this paper. The model is flexible and can be used by any IHE to increase the enrollment of UG and G minority students. To make the model work, the IHE needs to obtain a ten-year projection and target certain numbers of UG and G minority students by looking at existing numbers, and should allocate resources and provide fellowships for qualified minority students. Student advisors play a vital role in retaining and keeping track of students’ academic progress and making sure that they complete their study program and graduate within the specified time period. The department should develop videos on faculty development to educate faculty for active participation in recruitment and retention efforts. Student advisors must take responsibility for advising students throughout their academic careers. The IHE program directors must require regular academic progress reports of students from advisors. If students are having any academic problems, advisors must develop a strategy with the students to resolve problems and assist them in their academic career. It is clear that diversity efforts pay off both in the short-term and long-term. Graduating students of IHE will become the next generation of academic and business leaders throughout the nation and the world. The process of recruitment and retention of minority students through support and mentoring requires the dedicated efforts of faculty and administration. Minority students gain lifelong experience that will shape them as society’s role models, particularly from mentor-mentee relationships, and in this way, they will begin to contribute back to the society completing the continuous process. In the 21st century, when the United States is becoming increasingly diverse and the working world is becoming increasingly globalized, it is essential for all IHE’s to create an environment that welcomes students, faculty and staff of all races, nationalities, and religions. The model proposed here should help the efforts of IHE’s with the recruitment and retention of students, assisting them in a career that will make a difference.
Bibliography

Acknowledgment

The model idea came from reading “The University of Florida Strategic Plan,” developed in August 2002 by Dr. Charles E. Young, then President of the University of Florida.
