Diversifying STEM Pathways: Math Circles of Chicago

Douglas O'Roark, Math Circles of Chicago

Doug has served as the Executive Director of MC2 since 2915. Previously he led the Secondary Math component of the UChicago Urban Teacher Education Program and was the first teacher hired at Payton College Prep, a school that is regularly ranked as one of the top ten high schools in the country. He was awarded the Radio Shack National Teacher Award, the MAA's Sliffe Award for Distinguished Math Teaching, and the ICTM Rine Secondary Math Teaching Award. Both the City of Chicago Math League and Payton Prep have awards named in his honor.

Mr. Boz N Bell, HP Inc.
Mrs. Tiffany Grant King, HP Inc.

Mechanical engineer with both academic research experience and industry experience in the areas of automotive, pharmaceutical, paper manufacturing, consumer products/goods, and technology engaged in the challenges in STEM education, talent acquisition, and global business systems.

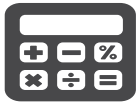
01 A Diversifying Pathways: The Need

Math is Foundational for STEM…and More

MC² MATH CIRCLES OF CHICAGO

At the University of Illinois, to major in Physics, Engineering, Science or Computer Science you need a collection of skills

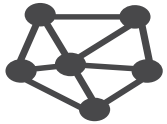
Calculus



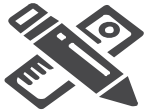
Multi-Variable Calculus

Differential Equations

Statistics



Discrete Math

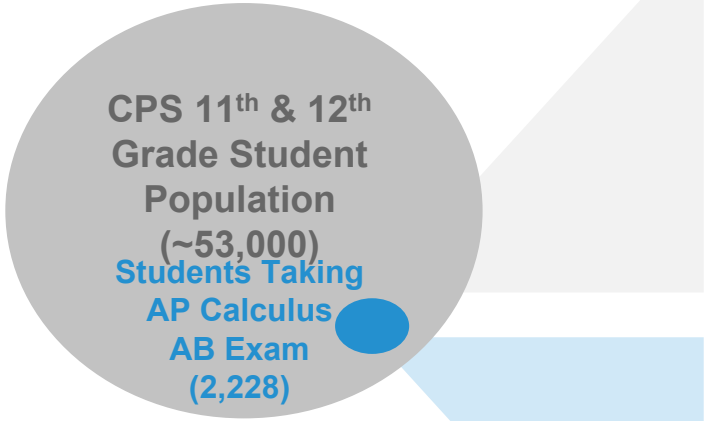


Advanced Algebra and Pre-Calculus

The University of Illinois at Urbana-Champaign is the flagship university of our state and is nationally known for its engineering program

Looking at Chicago Today

MC² MATH CIRCLES OF CHICAGO



CPS Students taking AP Calculus are not representative of the overall CPS student population

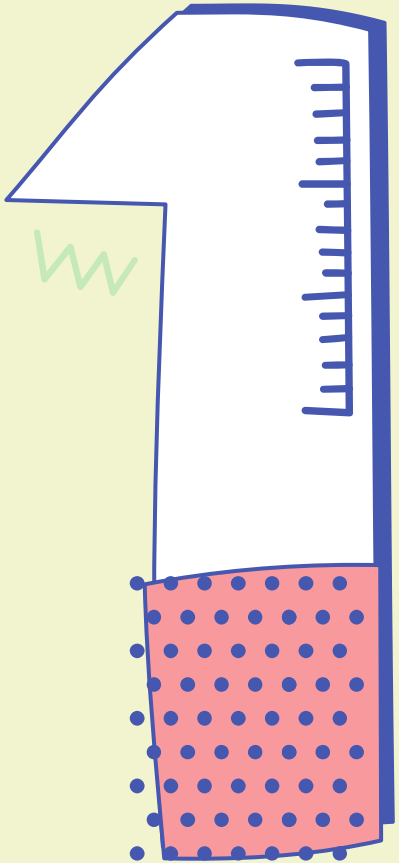
Guiding Questions:

What are the essential elements of a program that will have real impact in diversifying STEM pathways? How can the engineering community engage in this work?

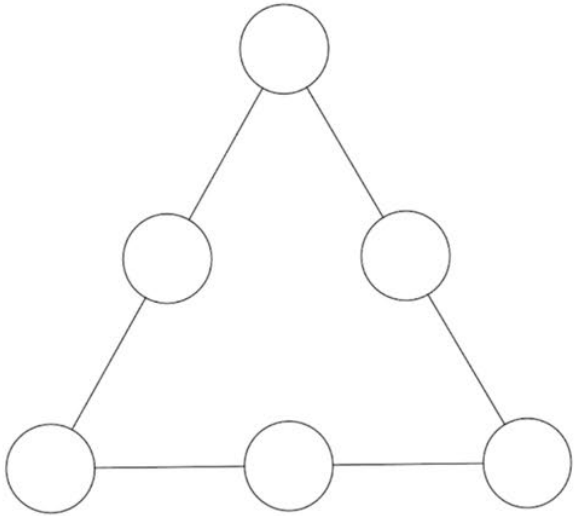


01 B

What is a math circle?

The Triangle Game: Think/Pair

Place the numbers 1 to 6 in the circles so that the sum along each side is the same.



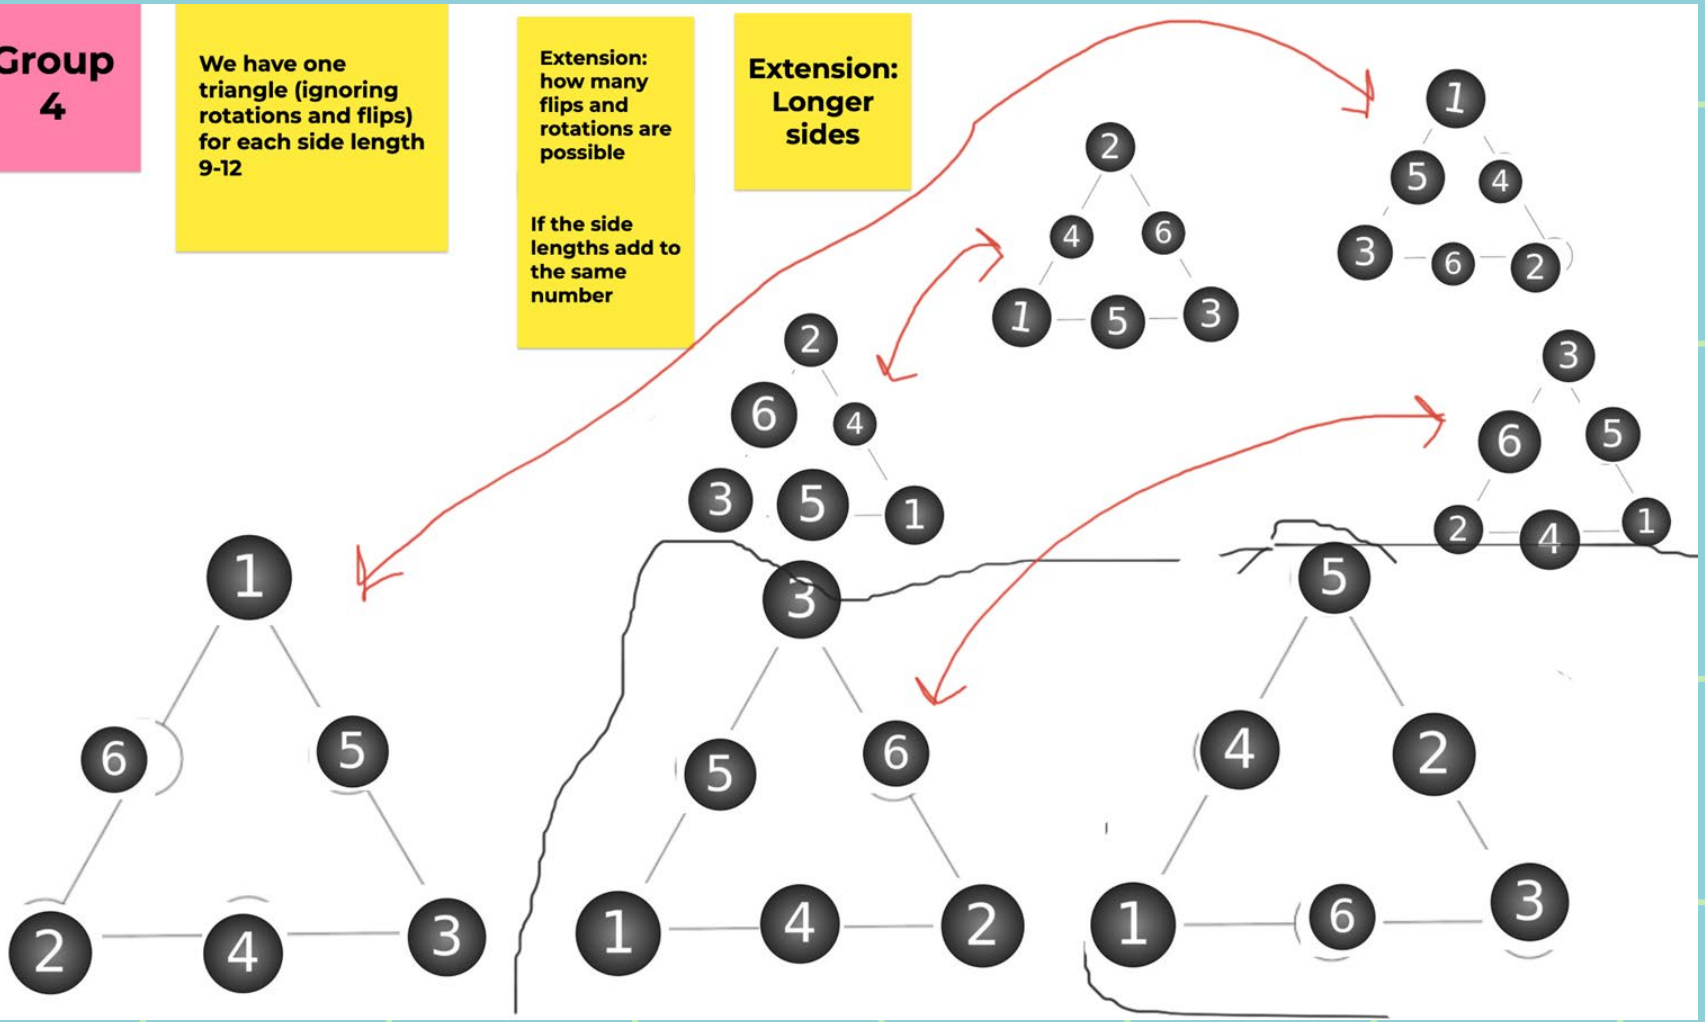
Group 4

We have one triangle (ignoring rotations and flips) for each side length 9-12

Extension: how many flips and rotations are possible

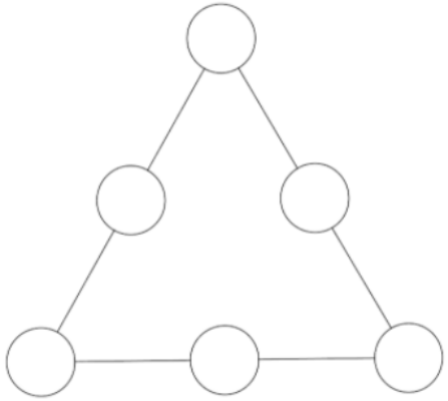
If the side lengths add to the same number

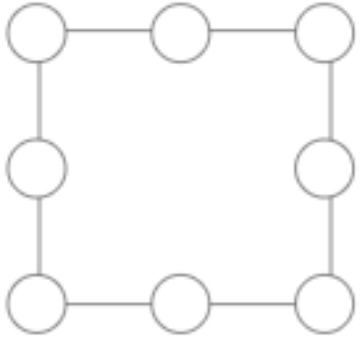
Extension: Longer sides



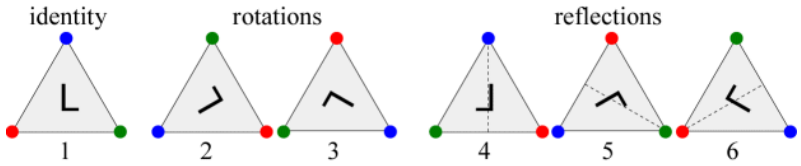
Equipping Kids to Participate in STEM Fields

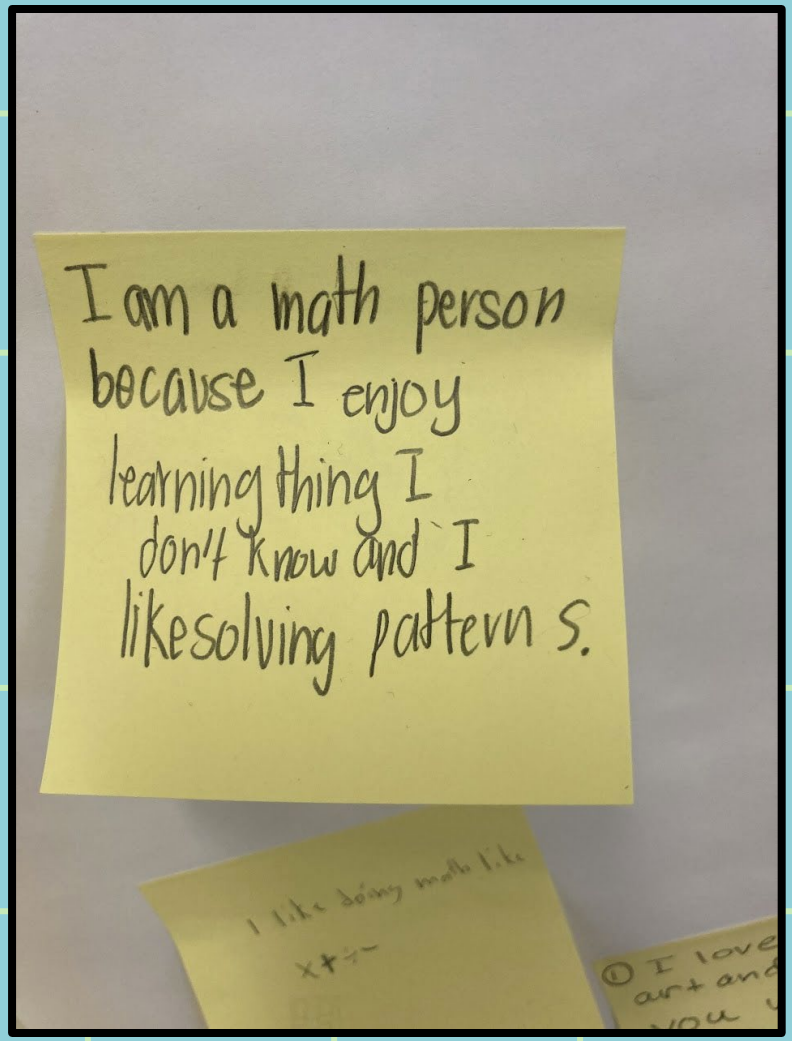
MC² MATH CIRCLES OF CHICAGO



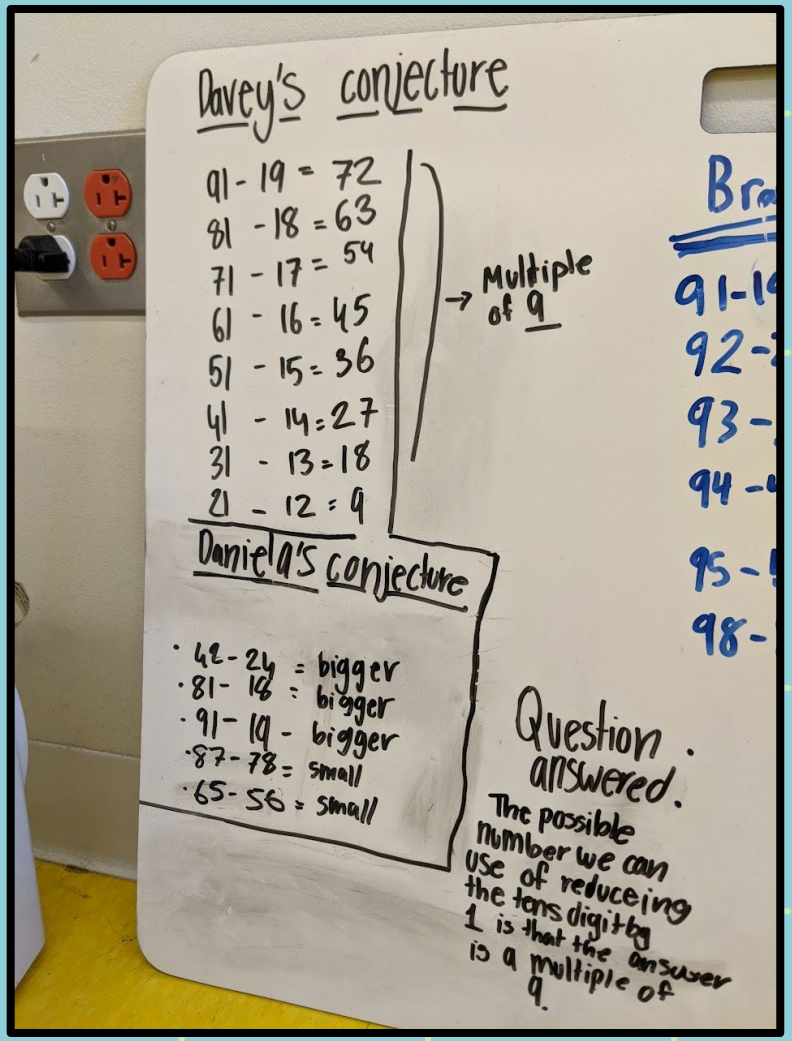


- Symmetry
- Transformational Geometry
- Parity
- Reasoning & Logic
- Algebra/Abstract Algebra/Group Theory
- Extensions & Conjectures





I am a math person because I enjoy learning thing I don't know and I likesolving patterns.



Davey's conjecture
91 - 19 = 72
81 - 18 = 63
71 - 17 = 54
61 - 16 = 45
51 - 15 = 36
41 - 14 = 27
31 - 13 = 18
21 - 12 = 9
→ Multiple of 9
Daniela's conjecture
· 42 - 24 = bigger
· 81 - 18 = bigger
· 91 - 19 = bigger
· 87 - 78 = small
· 65 - 56 = small
Question answered.
The possible number we can use of reduceing the tens digit by 1 is that the answer is a multiple of 9.

How do you know you know you found all of the solutions to the triangle game?

Strategy	Who and What	Order
Prove that 8 or 13 is impossible		5
Show the 6 symmetries of triangle to argue that some solutions are equivalent		4
Argue that given a side sum and one vertex number that numbers in other positions are pre-determined		6
Begin by showing that the sum of the vertices must be a multiple of 3 (using Algebra) and arguing from there		
Trial and error/guess and check--includes solutions for 9, 10, 11, and/or 12		1
In effort to give *all* solutions, lists more than 4, some of which are congruent		3

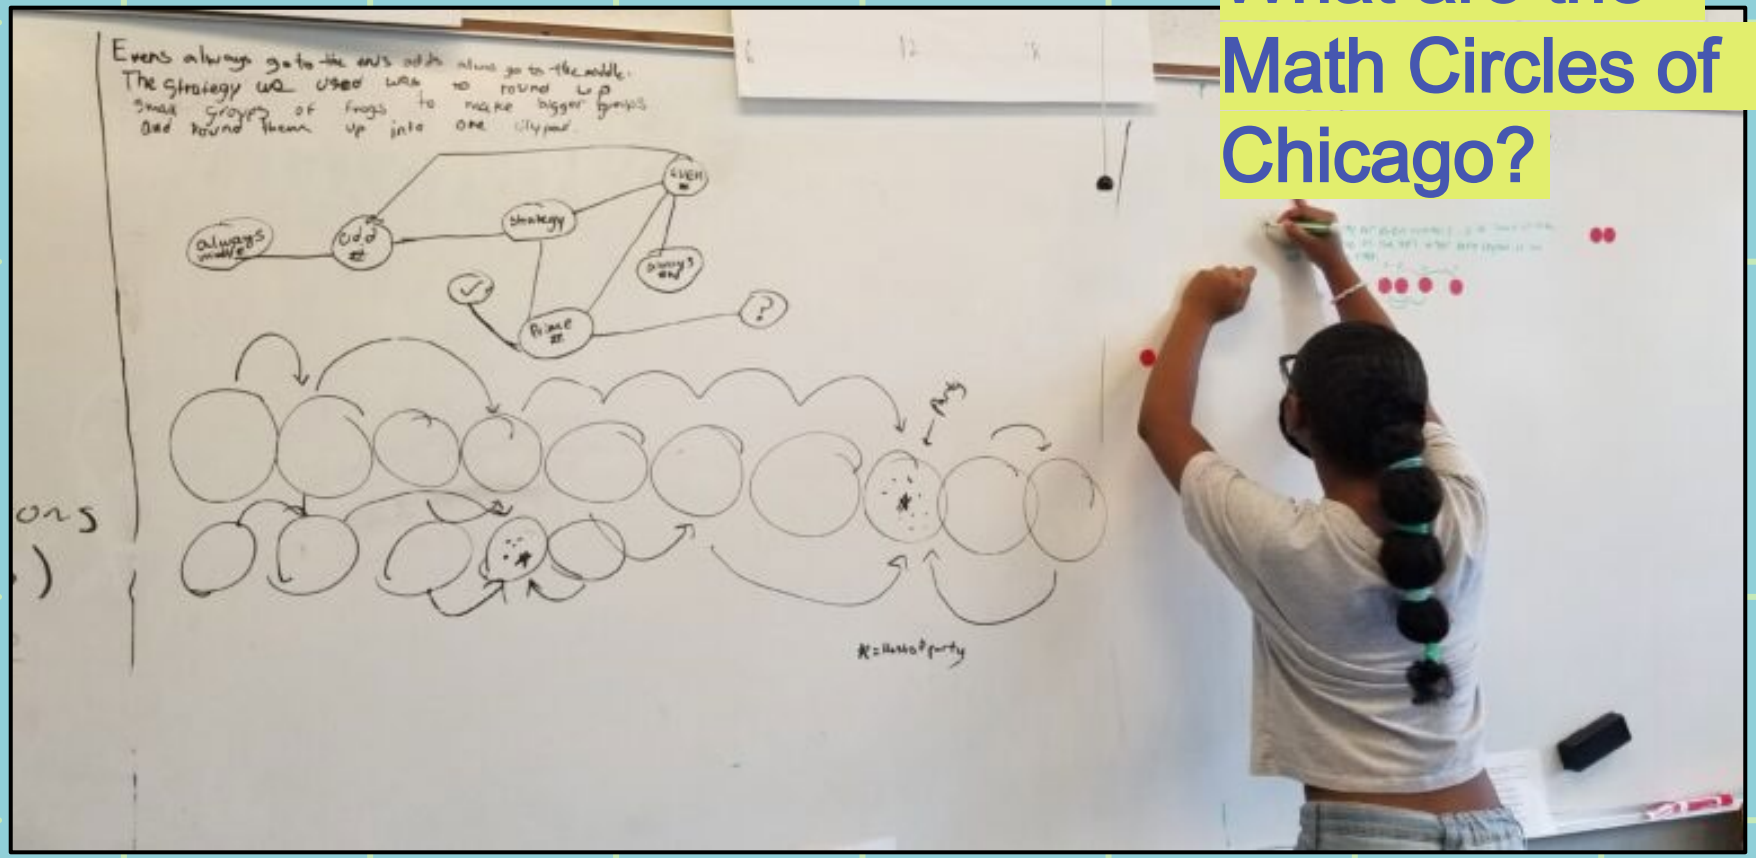
What are the Math Circles of Chicago?

What are the Math Circles of Chicago?



Our Mission

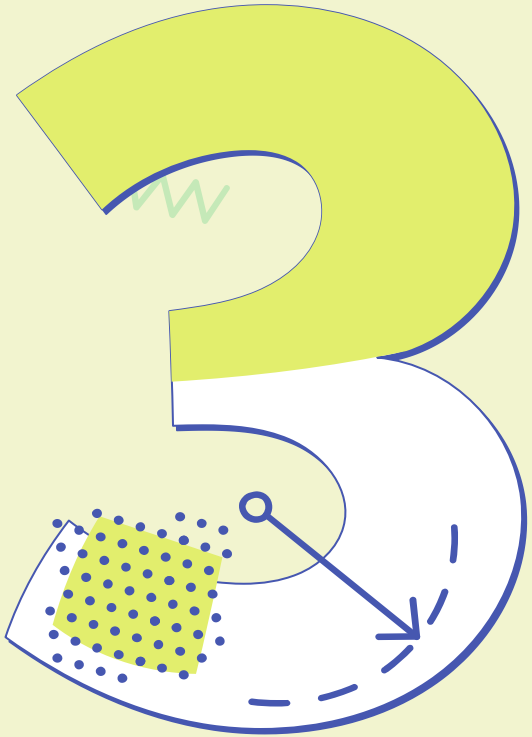
MC² MATH CIRCLES OF CHICAGO

Math Circles of Chicago (MC^2) achieves its mission by providing free, unique enrichment programs for 5^{th} – 12^{th} grade students of diverse backgrounds

MC²

Create opportunities for all children across Chicago to develop a passion for Mathematics

All Chicago, Every Kid, Amazing Math



Diverse and Strenthening Pathways: Research & Results

03

Math Circle Research

“To put this result in terms of the “average” participant and non-participant, our findings suggest that if Kim is a long-term regular Math Circle participant, then she is more likely to increase how much she wants to do well at math for both intrinsic (attainment) and extrinsic (utility) reasons, and that this effect may accumulate over time. In contrast, non-participants are likely to slightly decrease over time in wanting to do well in math, and this effect may also accumulate over time.”

Math Circle and OST Impact

"Participating students reported increases in their interests in mathematics, their confidence in their ability to tackle mathematics problems, and in their enjoyment of mathematics."

--Math Circles: A Tool for Promoting Engagement Among Middle School Minority Males

"Our overall conclusion is that OST programs are generally effective at producing the primary outcomes that would be expected based on their content and design."

--The Value of Out-of-School Time Programs

Researchers found that those who attended a five-to-six-week summer program for 20 or more days in 2013 did better on state math tests than similar students in the control group. This advantage was statistically significant and lasted through the following school year. The results are even more striking for high attenders in 2014: They outperformed control group students in both math and English Language Arts (ELA), on fall tests and later, in the spring. The advantage after the second summer was equivalent to 20-25 percent of a year's learning in math and ELA.

Quotes & Testimonials

- MC2 Parent: “My daughter used to love math….
- MC2 Parent: “My child has so much fun in Math Circles that he asked me after todays session to PLEASE Sign him up [for summer]!”
- Students:
  - “I like the new problems and puzzles I never knew math had.”
  - “They teach us things that we don’t often learn at school. It’s not normal math like equations, it’s word problems that involve different thinking.”
