Abstract
Japanese government launched a project to promote 300,000 international students by year 2020 and 450,000 international students by the year 2025. This program awakened and further encourages Japanese universities to develop and enhance better their offered curricula for their international competitiveness by obtaining the excellent international students as well as the stability of management. Among the Asian engineering students to Japan, China, Korea and Taiwan dominated the student number to give an 80% account to the total number. Considering the population of Asian engineering student to Japan, Japanese Society of Engineering Education (JSEE) should take an initiative in Association for Engineering Education in Southeast and East Asia and the Pacific (AEESEAP) in order to provide high quality education service for the Asian engineering students to Japan.
