

Understanding NIH:

Rosemarie Hunziker, PhD

Tissue Engineering/Regenerative Medicine and ImmunoEngineering
Program Director

National Institute of Biomedical Imaging and Bioengineering (NIBIB)
National Institutes of Health (NIH)

hunzikerr@mail.nih.gov
301-451-1609

The background of the slide is a green maze with light brown paths. In the upper right corner, there is a stylized outline of a house with a chimney. In the lower left corner, there is a stylized outline of a human brain.

Today's Agenda: **A guide to NIH**

- **Find your NIH Niche**
 - How is NIH different?
 - Unique IC missions, characters
- **Get Help from the Inside**
 - Comb the NIH websites
 - Find the right people

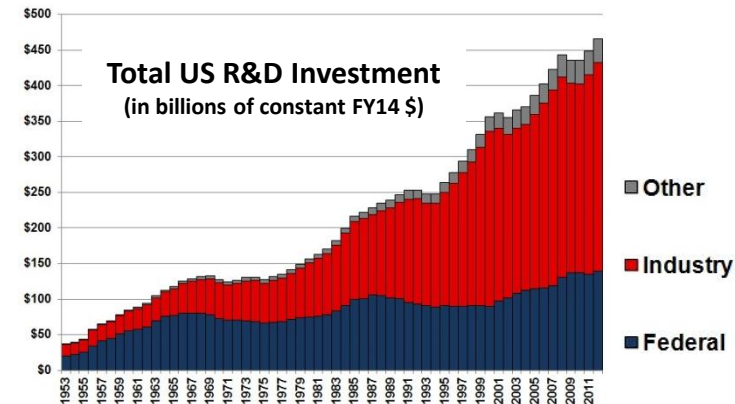

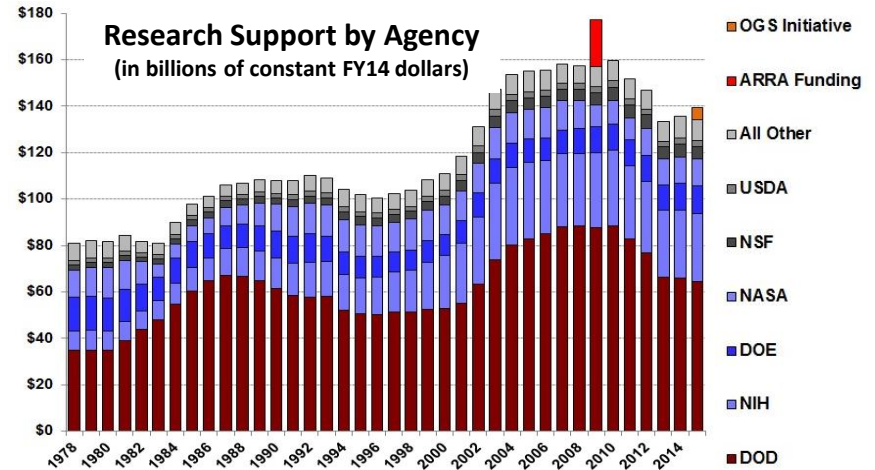

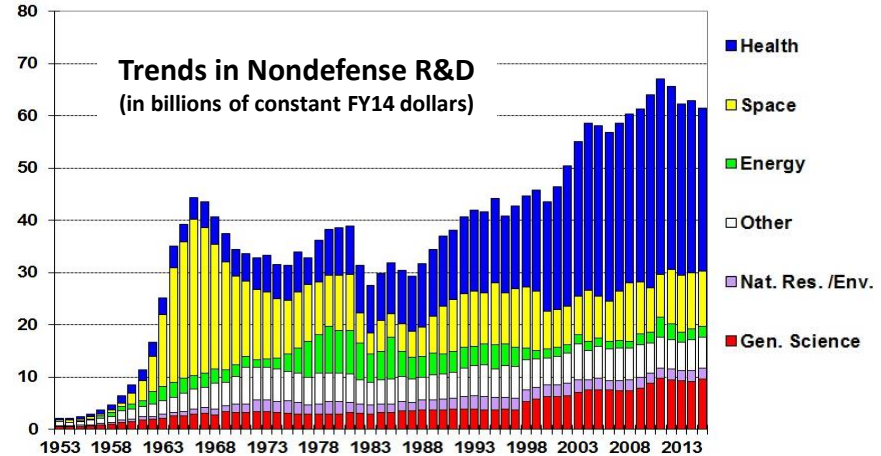

Federal Agencies in Science and Technology have **different**

- ✓ missions
- ✓ cultures
- ✓ rules
- ✓ levels of support
- ✓ expectations

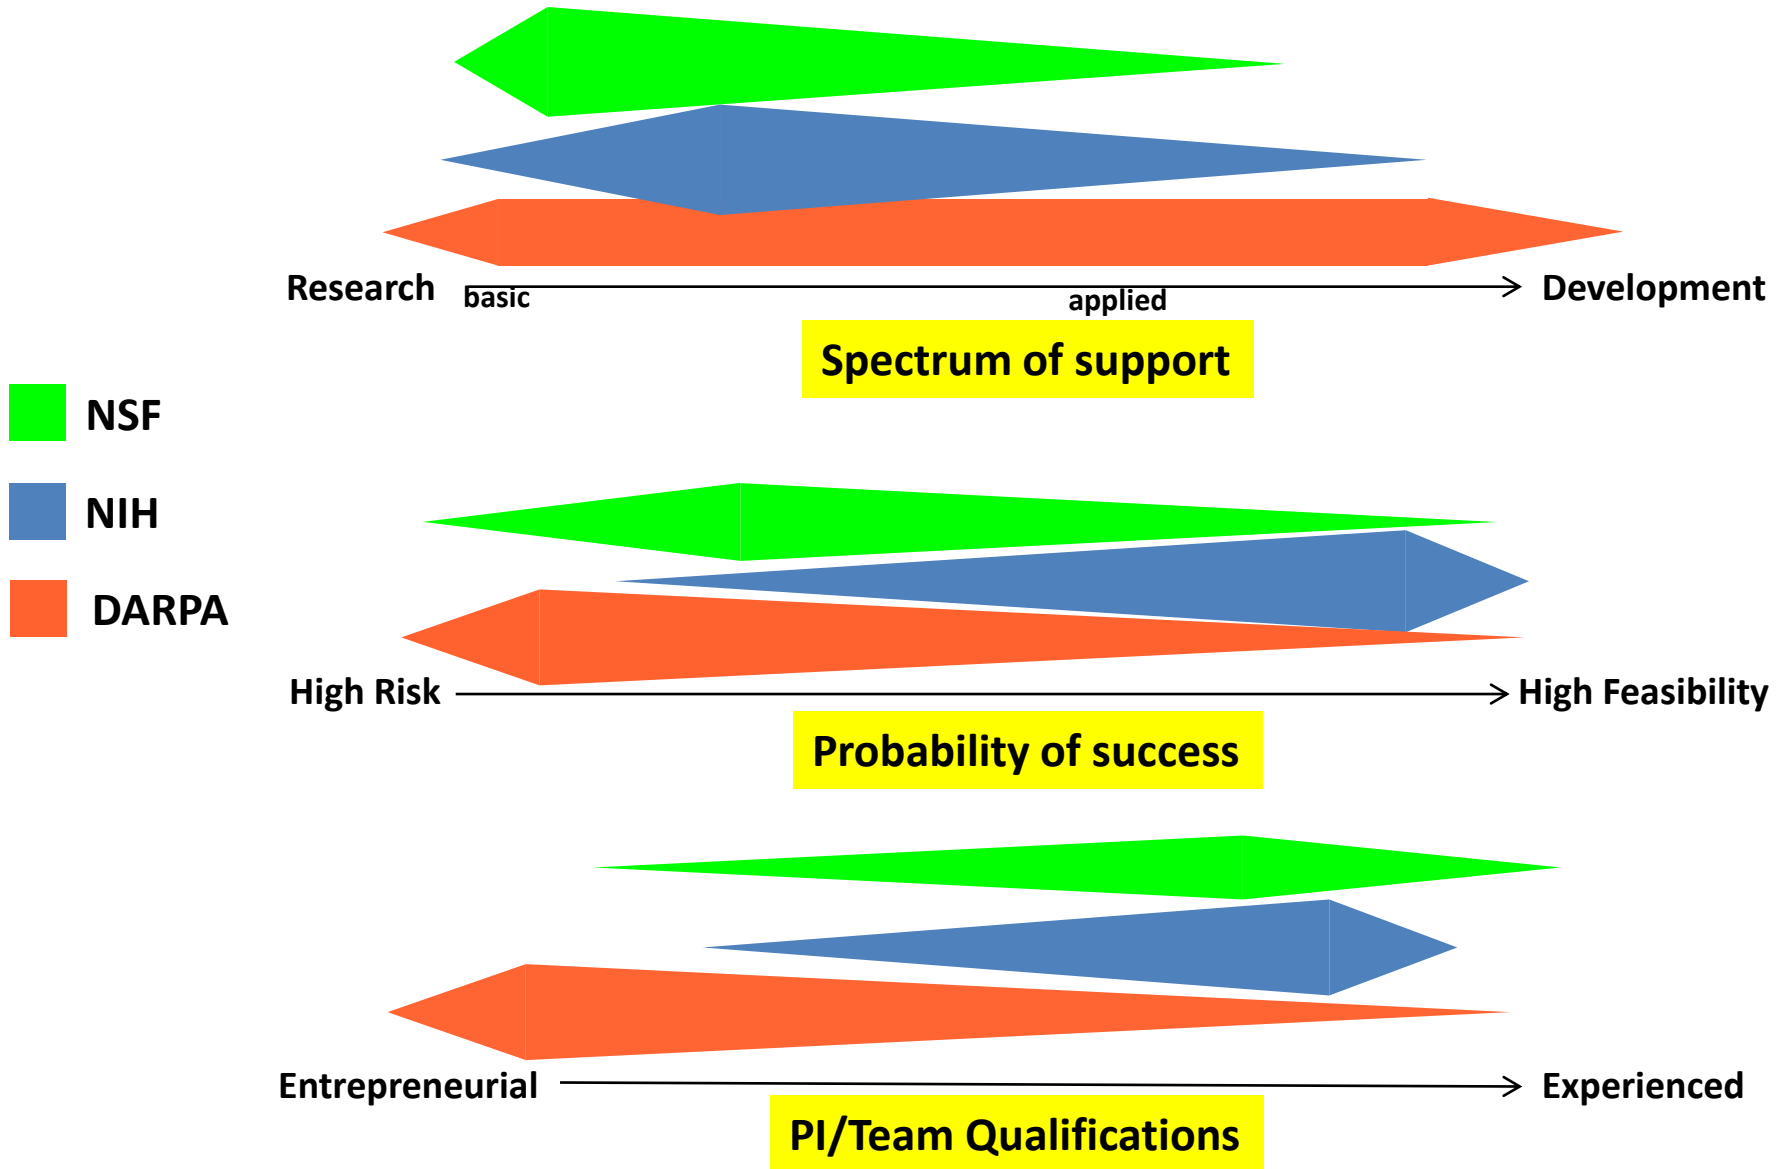

But the **same** overall goal

- ✓ protect the security, health, and well being of Americans
- ✓ maintain knowledge and application superiority
- ✓ fuel the engine of US economic growth

Different Agencies: Different Cultures

NIH is the steward of **medical and behavioral research** for the Nation. Its mission is science in pursuit of **fundamental knowledge** about the nature and behavior of living systems **and the application of that knowledge** to extend healthy life and reduce the burdens of illness and disability.

NIH “hot topics”

■ Cancer Moonshot

- Vaccines
- Early detection
- Single-cell genomic analysis
- Immunotherapy
- Pediatric cancer
- Data sharing

■ Precision Medicine Initiative

- Risk assessment based on environment, genetics
- Large-scale pharmacogenomics
- Biomarker discovery
- Mobile health
- Platforms for targeted therapy trials

■ BRAIN Initiative

- Fundamental science
- Neuroimaging and mapping

■ HIV vaccines, therapies, cure

■ Antimicrobial Resistance

■ Alzheimer’s Disease

■ Strengthen/sustain the biomedical research workforce

- High-risk/high-reward programs through Common Fund
- Diversity programs

21st Century Cures Act
Additions:

- FDA and regulatory science
- Clinical Regenerative Medicine w/ (adult) stem cells

How Does NIH Solicit Applications?

- **Federal Opportunity Announcements (FOA) published through**
 - the NIH Guide (<http://grants.nih.gov/grants/guide/>)
 - grants.gov
- **Parent Announcements cover basic activity codes**
 - investigator-initiated applications
- **Special Opportunities to fill gaps**
 - Requests for Applications (RFA), a one-time call with set aside funds
 - Program Announcement (PA) highlights areas of focus
 - Program Announcement with Special Review (PAR) for special consideration and “protected” review
 - Program Announcement with Set Aside (PAS) essentially, an RFA with multiple receipt dates

NIH FY16 Budget

NIH Divides most of its investment according to the interests of the component parts (i.e. Institutes or Centers), with 5% allocated to trans-NIH initiatives.

About 85% distributed via Extramural grants, contracts, cooperative agreements

Targeting IC Priorities: an example

NIBIB mission

accelerating the **application of biomedical technologies...**
[via] integrating the physical and engineering sciences with the life sciences to advance basic research and medical care.

NINDS mission

seek **fundamental knowledge about the brain and nervous system** and to use that knowledge to reduce the burden of neurological disease.

Novel polymer scaffold for tissue regeneration

Neural progenitor cells in biomimetic matrix in rat brain

Pivotal large animal studies for stroke therapy

Neural differentiation of stem cells

Imaging cells transplanted to the brain

NIH Supports Non Hypothesis-Driven Research

There are two kinds of scientific revolutions, those driven by new tools and those driven by new concepts... The effect of a concept-driven revolution is to explain old things in new ways. The effect of a tool-driven revolution is to discover new things that have to be explained.

-Freeman Dyson, 1997

How to Use RePORTER When Preparing New Grant Applications

Posted by [Dr. James Onken](#) on December 3, 2012

[Post a Comment](#) | [View Comments \(1\)](#) ↓

NIH offers two tools that can help you search for projects similar to the one you're thinking about. In this post, I'll take you on a quick tour of the [NIH RePORTER](#) tool, a repository of information about NIH-funded research projects, and show you how to find information that may be useful to know before you start writing a grant application. A future *Feedback Loop* post will cover the thesaurus-based search tool called [Like This](#).

Main Query Form

From RePORTER's [Main Query Form](#), you can search by principal investigator name, project number, organization, text term(s) and many other criteria.

[View larger image](#)

If you want to know which NIH institutes or centers fund projects like yours, or which study section would be most appropriate to review your application, then searching by text term(s) would probably be the best approach.

Need Help with Your Proposal...

Who Ya' Gonna' Call?

✓ **about the scientific and technical aspects of your application...**

- Find them on the solicitation
- See also the IC's programmatic descriptions (<http://www.nih.gov/icd/index.html>).

✓ **for questions during the review...**

- Listed on the eRA Commons link to your submitted proposal
- See also the review group rosters at the CSR web site

✓ **for help with the business aspects of a proposal...**

- Listed on the eRA Commons link to your submitted proposal
- See also the IC's programmatic descriptions (<http://www.nih.gov/icd/index.html>).

Director**

**Scientific
Review
Officer**

**Grants
Specialist**

NIH Program Officials: your primary contact

Pre-Application

- Assess the “fit” to the IC, Program(s)
- Start the conversation early: develop your ideas together
- Choose the right activity/mechanism
- Brief on Review Issues: Dos/Don'ts

Post Review

- Analyze the Summary Statement: deeper insights from the Review
- Understand the rating and assess the likelihood of funding
- BEWARE! Nothing is certain until you have it in writing

During the Award

- Discuss problems in execution (rebudgeting, re-scoping, extensions...)
- Find an administrator to address unusual issues
- Brag about important discoveries

Anytime

- Arrange introductions so you can serve on advisory boards, workshop panels, etc.
- Discover what's New and Coming Soon in Funding Opportunities

CTC Microchip: A One-in-a-Billion Technology

With enough sensitivity to detect and trap a single at-large cancer cell from among a billion blood cells, the impressive new Circulating Tumor Cell (CTC) microchip is showing much promise as it points the way to a new era in the fight against cancer.

Rosemarie Hunziker, Ph.D. 

Description

This program supports the research and development of new or novel biomaterials that can be used for a broad spectrum of biomedical applications such as implantable devices; tissue engineering; imaging agents; and biosensors and actuators.

Research that is supported includes the design, synthesis, characterization, processing and manufacturing of these materials as well as the design and development of devices constructed of these materials and their clinical performance.
